### Series 3000 MkII and MkIII

# Honeywell

2-wire loop powered toxic and Oxygen gas detector for use in potentially explosive atmospheres - explosion proof and intrinsically safe versions

## Series 3000 MkII and MkIII

### **Reliable detection**

- Proven electrochemical sensing technology
- Uses Surecell<sup>™</sup> electrochemical cells, ideal for hot and humid environments
- Long-life sensing elements
- Patented 'Reflex' sensing element verification diagnostics

### **Reduced installation costs**

- Integral surface mounting lugsOptional horizontal or vertical pipe
- mounting bracket
  Flameproof transmitter allows field wiring to be run along with other
- non-IS instruments
- Plug-in sensor removes wiringCan be retrofitted in place of Series 2000

### **Reduced commissioning costs**

- Sensor recognition feature auto
- configures transmitter
- Non-intrusive configuration
- Plug and play factory configured sensors

### Reduced maintenance costs

- IS sensor connection permits hot swap, reducing downtime
- reducing downtime
  User programmable calibration frequency
- Integral fault diagnostic software
  Menu/icon driven calibration procedure

### **Regulatory compliance**

- European (ATEX)
- US (UL)
- Canadian (c-UL)
- South America (Inmetro)
- International (IECEx)

### Range of optional accessories

- Remote sensor mounting kit
  Duct mounting kit (for H<sub>2</sub>, CO and H<sub>2</sub>S only)
- Calibration cup to apply test gas
- Collecting cone

### Typical applications

- Exploration and drilling platform
- Production platforms
- Onshore oil and gas terminals
- Refineries and chemical plants
- Power plants
- Waste water facilities
- Utilities

The Series 3000 range of transmitters provide comprehensive monitoring of toxic and Oxygen gas hazards in potentially explosive atmospheres. Suitable for mounting both indoors and out, they are available in two versions and offer excellent versatility. The MkII is contained in a flameproof housing, has an intrinsically safe sensor connection and is for use in predominantly Zone 1 applications. However with the use of the optional remote mounting kit the sensor of the MkII can be mounted in a Zone 0 environment. The MkIII is for use with a separate suitable IS barrier allowing the complete transmitter to be used in Zone 0 applications.

These low powered gas detectors all feature a loop powered 4-20 mA connection, making them ideal for both new and retrofit installations. Users can configure the detector through the use of the easy to read LCD and intuitive interface while fault diagnostic software and a programmable calibration period greatly simplify maintenance procedures.

The intrinsically safe smart sensors are supplied pre-configured and can be 'hot swapped' without having to remove power to the detector, saving time and money during commissioning and routine servicing. A remote sensor mounting kit is available that allows the sensor to be mounted up to 15m (50ft) from the transmitter, making it ideal for operation in areas that are difficult to access. Series 3000 is supplied with all necessary accessories for easy installation. The detector can be wall mounted using the integral mounting lugs or pipe mounted (horizontal or vertical) using the optional pipe mounting kit. Electrical installation is made using the 2 x M20 cable entries (ATEX/IECEx version) or 2 x ¾"NPT conduit entries (UL/c-UL versions). A suitable blanking plug is also supplied to seal any unused entries. A weatherproof cap is included for use in the harshest outdoor conditions.

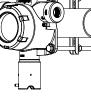

### Installation

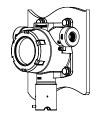

#### **Mechanical Installation Options**

Series 3000 MkII and MkIII are designed for use in potentially explosive atmospheres. As such, installation should follow national guidelines using suitable mechanically protected cable and glands (M20 or %" NPT) or conduit (%" NPT). Use 0.5mm<sup>2</sup> (20AWG) to 2.0mm<sup>2</sup> (~14AWG) cross sectional area cable as needed to ensure minimum operating voltage at the detector, depending on installed cable length. Various accessories are available for different applications.

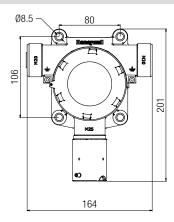

Duct Mount

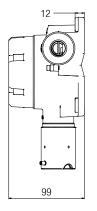

Pipe Mounting

Wall Mount

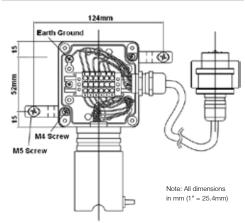

#### Dimensions

**Remote Mounting Arrangement** 

### Wiring Schematics Series 3000 MkII

### Detector supply V<sub>d</sub> 17Vdc (min) to 32Vdc (max)

- Maximum detector signal  $I_m$
- 22mA (over range)
- Cable resistance R

Subject to cable type

### Load resistor of control panel R

- Assumed 33Ω (min) or 250Ω (max)
- Subject to controller manufacturer

### Controller supply voltage V<sub>c</sub>

- Subject to controller manufacturer
- Assumed nominal of 24Vdc

### Typical Maximum Installed Cable Lengths Series 3000 Mkll

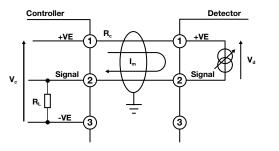

The maximum cable length between a controller and detector is dependent upon:

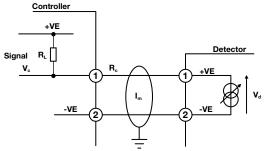

- The minimum guaranteed supply voltage to the detector at the controller (V\_c).
- The minimum operating voltage of the detector  $\left( V_{d} \right)$
- The maximum current draw of the detector  $(I_m)$
- The input impedance of the controller (R<sub>L</sub>)
  The resistance of the cable (R<sub>L</sub>)
- The resistance of the cable (R<sub>c</sub>)

Using the example values, the table opposite shows typical cable lengths.

For a specific application, the cable manufacturer's resistance data for a specific cable type must be used.

A cable length calculation formula can be found in the product technical manual.

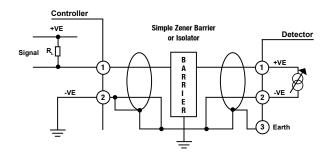

### Series 3000 MkII Maximum Cable Length shown in km (mi)

Cable Size	Cable Resistance R <sub>c</sub> Ω/km (Ω/mi)	Cable distance km (mi) where the Input Impedance $R_L = 33\Omega$	Cable distance km (mi) where the Input Impedance $R_L = 250\Omega$
0.5mm² (20AWG*)	36.8 (59.2)	3.9 (2.4)	0.9 (0.6)
1.0mm2 (17AWG*)	19.5 (31.4)	7.3 (4.5)	1.7 (1.1)
1.5mm² (16AWG*)	12.7 (20.4)	11.2 (7.0)	2.7 (1.7)
2.0mm <sup>2</sup> (14AWG*)	10.1 (16.3)	14.1 (8.8)	3.4 (2.1)

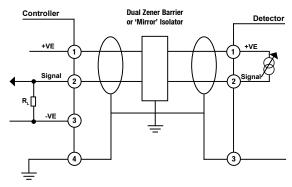

### Installation

### Wiring Schematics Series 3000 MkIII

### Single Barrier Schematic

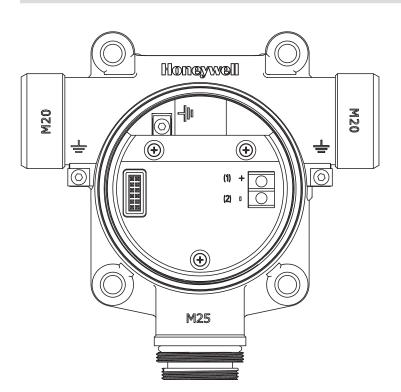

**Dual Barrier Schematic** 

#### Series 3000 MkIII Cable Length

The limiting factors in calculating maximum cable lengths when using barriers and isolators are the total capacitance and inductance. Barriers and isolators have a fixed amount of capacitance and inductance that can be connected to their outputs. The cable between the field device and barrier/isolator will have a value for capacitance and inductance per metre or kilometre that will be available from the manufacturer or supplier.

To calculate the maximum cable lengths, calculate the total capacitance and inductance for the length of cable, add any capacitance or inductance due to the field device (in the case of Series 3000 MkIII capacitance and inductance = 0). The resulting totals should not be greater than the value shown for the barrier or isolator.

#### **Electrical Connections**

Signal

Suggested barriers and isolators Series 3000 MkIII
--

Listed below are some suggested barriers and isolators for use with Series 3000 MkIII.

MTL7728+ (single channel zener barrier) MTL7787+ (2-channel zener barrier) MTL5042 (Galvanic Isolator) Pepperl+Fuchs KFD2-STC4-EX1 (Galvanic Isolator)

2

Note: It is up to the user to ensure that the barrier or isolator used is suitable for their application.

## **Technical Summary**

### Series 3000 Mkll and Mklll Detector

Use

Rugged and reliable gas detector for the protection of personnel from toxic and Oxygen gas hazards. Mkll version suitable for use in Zone 1, 2, 21 or 22 hazardous areas and North American Class I and II Division 1 or 2 areas. Mklll version suitable for use in Zone 0, 1, 2, 20, 21 or 22 applications.

Gas	Formula	Selectable Full Scale Range	Default Range	<b>Operating Temperature**</b>	
				Min	Max
Oxygen	02	25.0% / Vol only	25.0%Vol	-30°C / -22°F	55°C / 131°F

A complete assembly consists of two parts, a transmitter and sensor which must be ordered separately.

- Transmitter PN#: Two certified versions are available:
  - ATEX/IECEx approved version (Aluminium version part number S3KAL2, S3KAL3 Stainless Steel version part number S3KAS2, S3KAS3)
  - UL/CSA approved version (Aluminium version part number S3KUL2, S3KUL3, Stainless Steel version part number S3KUS2, S3KUS3)
  - Inmetro approved version (Aluminium version part number S3KNL2, S3KNL3, Stainless Steel version part number S3KNS2, S3KNS3)
- Sensor PN#: All certified ATEX, IECEx, UL, CSA (c-UL) with two digits to specify gas type and range:
  - e.g. S3KXXC1SS (C1 denotes Carbon Monoxide, with a default range of 0-300ppm and user configurable for ranges from 0-100ppm to 0-500ppm (in 100ppm steps))
